## RESEARCH PROJECTS

---

- RP1 **PDC – Proactive Data Containers** 2021 – Present  
Collaborator on the PDC project that seeks to provide a novel data abstraction for managing science data in an object-oriented manner. PDC covers multiple R&D efforts such as formulation of object-oriented PDCs and their mapping in different levels of the exascale storage hierarchy, efficient strategies for moving data in deep storage hierarchies, techniques for transforming and reorganizing data based on application requirements, and novel analysis paradigms for enabling data transformations and user-defined analysis on data in PDCs.
- RP2 **ECP – Exascale Computing Project** (exascaleproject.org) 2021 – 2023  
Key member on the ECP's ExaIO team that develops HDF5 and UnifyFS libraries in the Exascale Computing Project. Collaborator on the ECP ST/App Integration. ECP is an effort of the US Department of Energy (DOE). ECP aims to deliver breakthrough modeling and simulation solutions that analyze more data in less time, providing insights and answers to the most critical US challenges in scientific discovery, energy assurance, economic competitiveness, and national security. This project encompasses applications, system software, hardware technologies and architectures, and workforce development to meet the scientific and national security mission needs of DOE.
- RP3 **Towards Exascale I/O** 2018 – 2021  
Collaborator on the Towards Exascale I/O research project that combines the skills of the Parallel and Distributed Processing Group (GPPD) of the Federal University of Rio Grande do Sul with the research teams of the Barcelona Supercomputing Center (BSC), INRIA, and the National Laboratory for Scientific Computing (LNCC). The GPPD has maintained a line of research on HPC storage for more than 15 years, through various postgraduate studies that have resulted in indexed publications, in addition to several doctoral theses and master's dissertations in I/O for HPC. The BSC Storage group has recognized experience in I/O for HPC due to its expertise with the MareNostrum supercomputer. INRIA Grenoble and Bordeaux have recognized experience in projects with high storage capacities and I/O. Finally, this project aims to bring collaborations in parallel I/O for HPC by proposing and evaluating strategies that help reach Exascale.  
*Financed by the Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq), Brazil.*
- RP4 **High Performance Computing for Energy (HPC4E)** (hpc4e.eu) 2016 – 2016  
Collaborator on the HPC4E project, which aimed to apply new exascale HPC techniques to energy industry simulations, customizing them, and going beyond the state-of-the-art for different energy source simulations. The HPC4E consortium encompassed 13 partners, seven from Europe, and six from Brazil.
