RESEARCH PROJECTS

P1 Towards Exascale I/O 2018 – Present

Collaborator on the Towards Exascale I/O research project that combines the skills of the Parallel and Distributed Processing Group (GPPD) of the Federal University of Rio Grande do Sul with the research teams of the Barcelona Supercomputing Center (BSC), INRIA, and the National Laboratory for Scientific Computing (LNCC). The GPPD has maintained a line of research on HPC storage for more than 15 years, through various postgraduate studies that have resulted in indexed publications, in addition to several doctoral theses and master's dissertations in I/O for HPC. The BSC Storage group has recognized experience in I/O for HPC due to its expertise with the MareNostrum supercomputer. INRIA Grenoble and Bordeaux have recognized experience in projects with high storage capacities and I/O. Finally, this project aims to bring collaborations in parallel I/O for HPC by proposing and evaluating strategies that help reach Exascale.

Financed by the Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq), Brazil.

P2 High Performance Computing for Energy (HPC4E) (hpc4e.eu) 2016 – 2016

Collaborator on the HPC4E project, which aimed to apply new exascale HPC techniques to energy industry simulations, customizing them, and going beyond the state-of-the-art for different energy source simulations. The HPC4E consortium encompassed 13 partners, seven from Europe, and six from Brazil.
